OBJECTIVE

I'm a Computer Science student specializing in Cybersecurity with a strong interest in Defensive Security and Backend Development. I'm developing practical skills in SOC operations, threat detection, vulnerability assessment, and security monitoring, while learning Python and Django for backend development. My goal is to **combine security operations and secure backend engineering** to build reliable systems that can withstand real-world threats.

EDUCATION

Bachelor of Technology 2024-2028
Indian Institute of Information Technology, Kottayam CGPA: 7.53
Relevant coursework: Data Structures, Operating Systems, Computer Networks, DBMS, Object-Oriented Programming, Secure Software Engineering, Fundamental of Data Science

SKILLS

Languages: C, C++, Python, JavaScript, TypeScript, SQL, Solidity
Backend & Web: Django, Django REST Framework, Node.js, Express.js, Flask, REST APIs, JWT Authentication, React.js, HTML5, CSS3, Tailwind CSS
Database and Systems: DBMS, MySQL, MongoDB
Tools & Platforms: Git, GitHub, Linux, Hardhat, Jupyter Notebook, Splunk, Wireshark, Nmap, Burp Suite
Security (supporting): Vulnerability assessment, log analysis (Windows/Linux), SIEM, fuzzing tools, threat detection

PROJECTS

1. SecureExam - Scalable Web-Based Examination Platform (GitHub)
Full-stack examination platform with secure authentication, automated grading, and role-based access for students and faculty.

- Developed REST APIs with MongoDB indexing and pagination; evaluated backend performance under concurrent requests using Autocannon.
- Implemented email OTP verification, bcrypt password hashing, and role-based dashboards for students and faculty.
- **Tech Stack:** Node.js, Express.js, MongoDB, bcrypt, TensorFlow.js, HTML5, CSS3, JavaScript

2. HuntChain (github-link)
Built a decentralized bug bounty platform on Ethereum where companies lock ETH rewards on-chain and automatically pay security researchers upon report acceptance.

- Architected and deployed a Solidity smart contract on Ethereum implementing a full bug bounty lifecycle — bounty creation, report submission, acceptance/rejection, and automated ETH payouts
- Deployed contracts using Hardhat Ignition to Ethereum Sepolia testnet
- **Tech Stack:** Solidity · Ethereum · Hardhat 3 · React · TypeScript · Vite · Web3 · Blockchain

3. Threat Hunting and MITRE ATTCK Mapping (github-link)
Developed a full-stack Threat Hunting and Security Investigation Platform using React, Django REST Framework, and PostgreSQL to streamline SOC (Security Operations Center) operations and incident response workflows.

Tech Stack and Tools: Python,JavaScript,SQL,React.js, Tailwind CSS,Recharts,Vite,Django, Django REST Framework (DRF), JWT Authentication, PostgreSQL, Splunk Enterprise (REST API)

AWARDS AND ACHIEVEMENT (Available)

- **Hackathon - The escalating IoT Security Crisis** 15 November 2025
  Participated in UDBHAV(Inter IIIT Hackathon) 2025, a 24-hour national-level hackathon.
- **CTFs(Capture The Flag)**
  0xFUN: rank 143/1359, APOORV-CTF: rank 55, IIITK-CTF: rank 11, THM(Summer Byte Lotus): Five Stars
- **Top three percent at Try Hack Me**
- **Solved 250+ Data Structures and Algorithms (DSA) problems**
