Kanpur, Uttar Pradesh, India

Contact No.: [8303781758](tel:8303781758) — E-mail: itsssb123@gmail.com

LinkedIn: [Mohd Sabir](#) — GitHub: [Mohd Sabir](#)

OBJECTIVE

I'm a Computer Science student specializing in Cybersecurity with interest in Machine Learning. I enjoy building scalable applications while ensuring they are secure and resilient to real-world threats. I'm actively developing skills in threat analysis, Vulnerability Assessment, and data protection and Penetration testing. My goal is to create **robust backend systems** that are secure by design.

EDUCATION

Bachelor of Technology 2024-2028
Indian Institute of Information Technology, Kottayam , CGPA: 7.58

Intermediate - Cheena Public School 2022
Percentage: 82.6

High School - Cheena Public School 2020
Percentage: 86

SKILLS

Programming Languages: C, C++, JavaScript, Python, solidity, NodeJS

Frontend Development: HTML5, CSS, Web Programming with Python and JavaScript and SQL using frameworks like Flask, Django, and Bootstrap

Core CS Fundamentals: Operating Systems, Computer Networks, Object-Oriented Programming, Data Structures, DBMS, Secure Software Engineering

Tools and Technologies: GitHub, Linux, Linux tools, fuzzing tools, wireshark, BeEF, Nmap, Jupyter Notebook, Recon tools, burpsuite

Soft Skills: Critical Thinking, Problem Solving, Teamwork, Time Management

PROJECTS

1. SecureExam - Web-Based Examination Platform ([github-link](#))

Developed a full-stack web examination platform with secure user authentication, exam management, and automated grading capabilities. Built using Express.js, MongoDB, and JavaScript with role-based access control for students and faculty.

- Implemented email OTP verification, session-based authentication with bcrypt password hashing, and role-based dashboards for students and faculty
- **Tech Stack:** Node.js with Express.js, MongoDB, bcrypt, HTML5, CSS3, vanilla JavaScript, and TensorFlow.js

2. HuntChain ([github-link](#))

Built a decentralized bug bounty platform on Ethereum where companies lock ETH rewards on-chain and automatically pay security researchers upon report acceptance.

- Architected and deployed a Solidity smart contract on Ethereum implementing a full bug bounty lifecycle — bounty creation, report submission, acceptance/rejection, and automated ETH payouts
- Deployed contracts using Hardhat Ignition to Ethereum Sepolia testnet
- **Tech Stack:** Solidity · Ethereum · Hardhat 3 · React · TypeScript · Vite · Web3 · Blockchain

AWARDS AND ACHIEVEMENT ([Available](#))

- **Hackathon - The escalating IoT Security Crisis** 15 November 2025
Participated in UDBHAV(Inter IIT Hackathon) 2025, a 24-hour national-level hackathon.
- **CTFs(Capture The Flag)**
0xFUN: rank 143/1359, APOORV-CTF: rank 55, IITK-CTF: rank 11, THM(Summer Byte Lotus): Five Stars
- Top six percent at Try Hack Me
- Solved 200+ Data Structures and Algorithms (DSA) problems
